Abstract

After three years of study you are a Master in Systems Engineering. However, many more years of experience are needed to become a recognized Systems Engineer. In this workshop we discuss what you can do to develop further as Systems Engineer.
Colophon

Merete Faanes from Buskerud University College created the educational flow Reflective Practice. Reflective Practice is a thread throughout the entire master Systems Engineering to stimulate students to relate Education and Practice.

These workshops are the result of the cooperation of Merete Faanes and Gerrit Muller
Describe how far you envision yourself to be in the development toward an industrial grade systems engineer.

Describe in what direction you want to develop yourself (which does not have to be an industrial grade systems engineer).
9:00  welcome, last workshop, introduction this workshop

9:10  block 1: Gap analysis

10:20 block 2: Exploration of development options

11:30 block 3: Personal short and long term plan

12:40 plenary discussion

12:50 pre-assignment next workshop, close
Identify the gaps in knowledge, skills, and experience between where you are now and where you want to be in the future.

> be specific

> give examples

Identify the possible ways to get and develop the missing knowledge, skills, or experience

> be specific

> give examples

Results on flipover
+ Make a short term plan for your working and learning activities in the period April-October

+ Make a long term plan for your personal development in the next 5 to 10 years

> be specific

> give examples

Results on flipover
Update your description how far you envision yourself to be in the development toward an industrial grade systems engineer.

Update your description in what direction you want to develop yourself (which does not have to be an industrial grade systems engineer).

Describe potential options for development.

Consolidate the short and the long term plan.

Add a reflection on the complete workshop from pre-assignment to post-assignment.

4 A4s maximum
Write the first page of your paper: the introduction.

Include figures where this is functional.

Be aware that the readers of your paper share an interest in systems engineering and probably will not work in your domain or know your company and system.
Alternate assignment; only after permission of the teacher

- do the pre-assignment and submit this to the teacher (as all other students)
- go through the workshop questions yourself
- discuss the questions and your answers with a local colleague
- write a (max) 2-page document with your answers including examples and rationale behind the answers
- send this 2-page document by mail to another student and ask for comments
- update the 2 page document
- do the post-assignment, include what the feedback of the other student changed in your thinking
- send 2 page document and post-assignment to the teacher
