Abstract

Hardware and software differ in their characteristics, which impacts their role in systems integration. The main message in this lesson is that the focus of integration is at the system, where both hardware and software contribute.

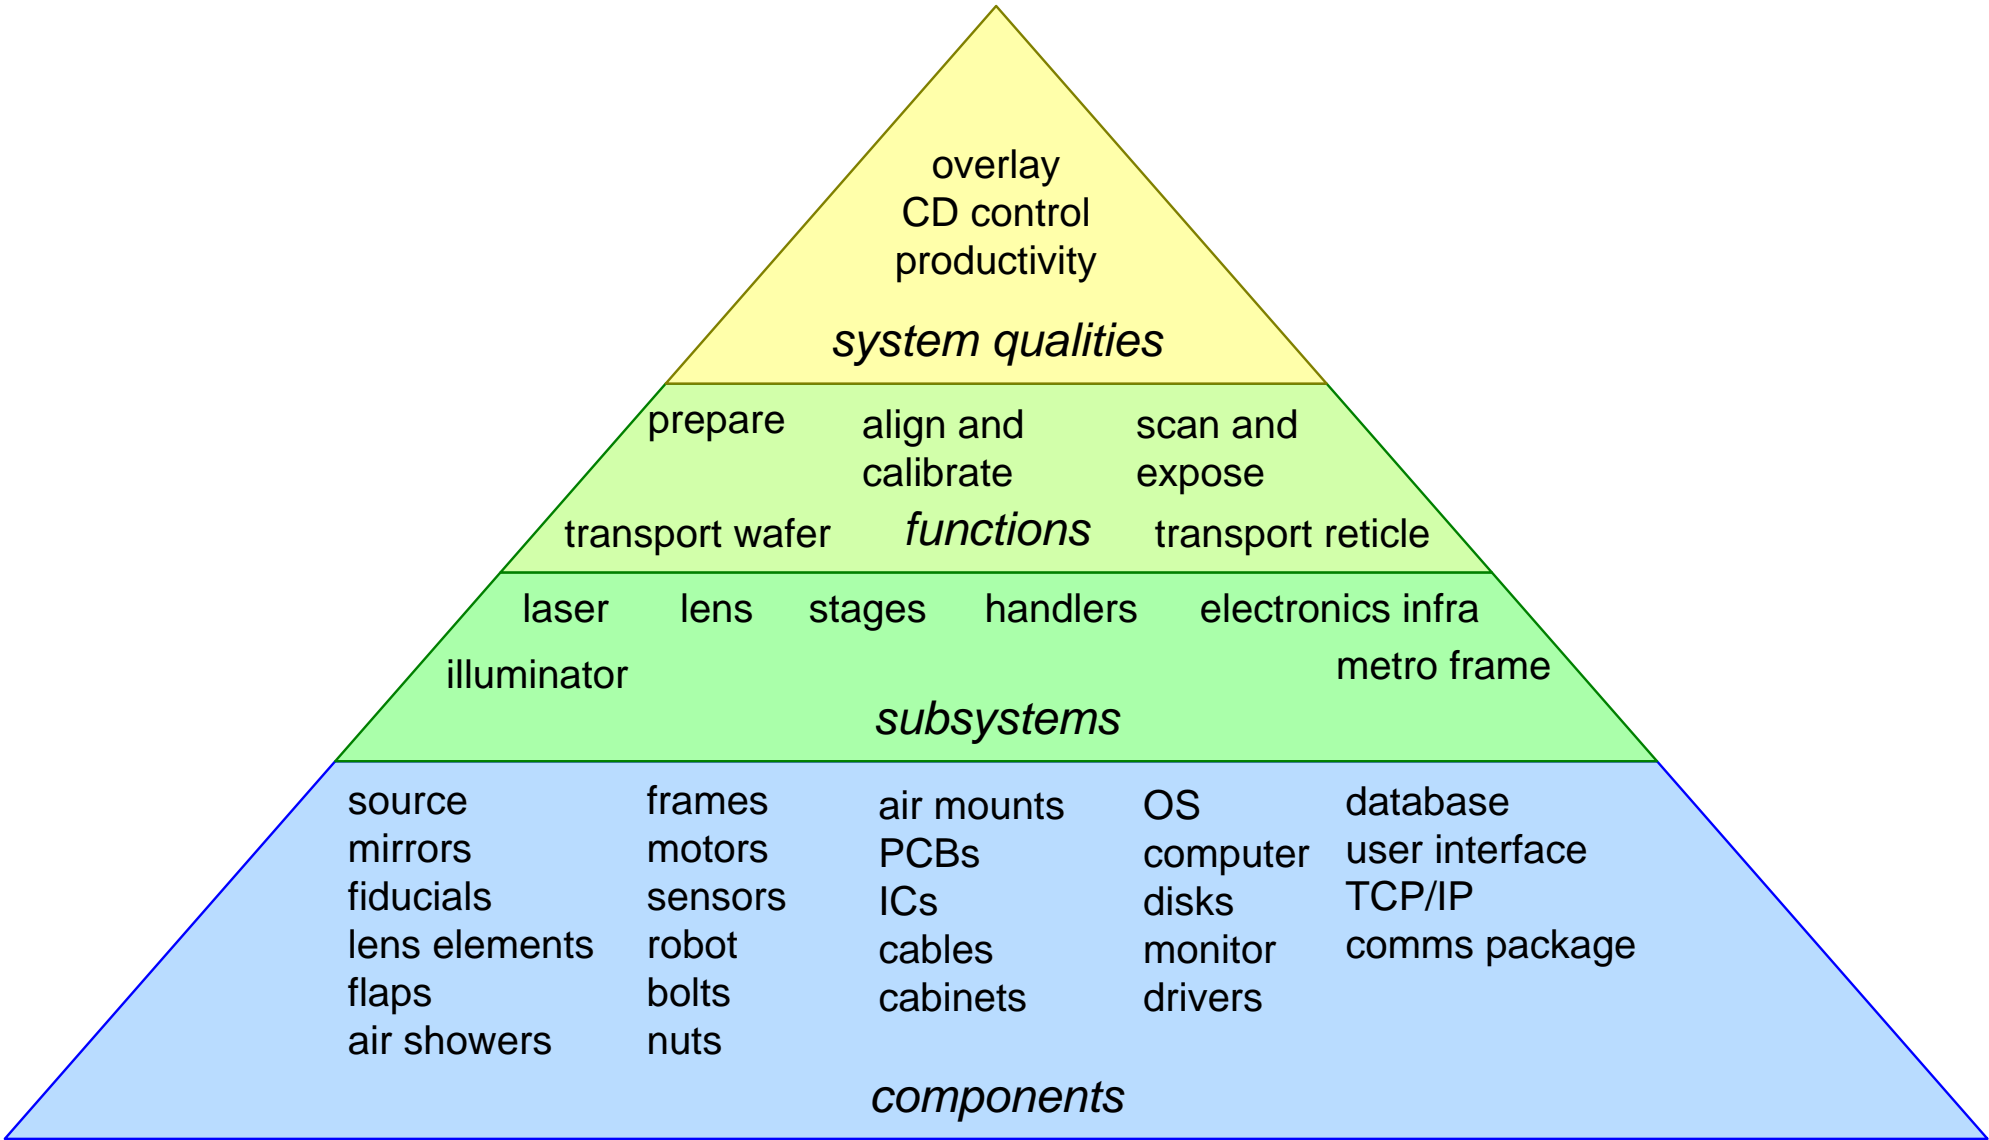

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

From Components to System Qualities

Role of Software

Pitfall: Late HW-SW Integration

Segregation of hardware and software is a typical organizational problem.

Such segregation ignores close coupling of hardware and software.

Erroneous assumptions about hardware are discovered late.

Key performance parameters are visible late.

Transition from Previous System to New System
