Abstract

Soft Real Time design addresses the performance aspects of the system design, under the assumption that the hard real time design is already well-covered. Core decisions in soft real time design are:

- granularity
- synchronization
- prioritization
- allocation
- resource management

The complete course ASP™ is owned by TNO-ESI. To teach this course a license from TNO-ESI is required. This material is preliminary course material.

All Gaudf documents are available at:
