## Abstract

This article positions the system architecture process in a wider business scope. This positioning is intended to help understanding the processes in which the system architect (or team of system architects) is involved.

It focuses on an organization that creates and builds systems consisting of hardware and software. Although other product areas such as solution providers, services, courseware, et cetera also need system architects, the process structure will deviate from the structure as presented here.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

# Simplified Decomposition of the Business

# Financial Characterization of Decomposition

# Multiple Instances per Process

---

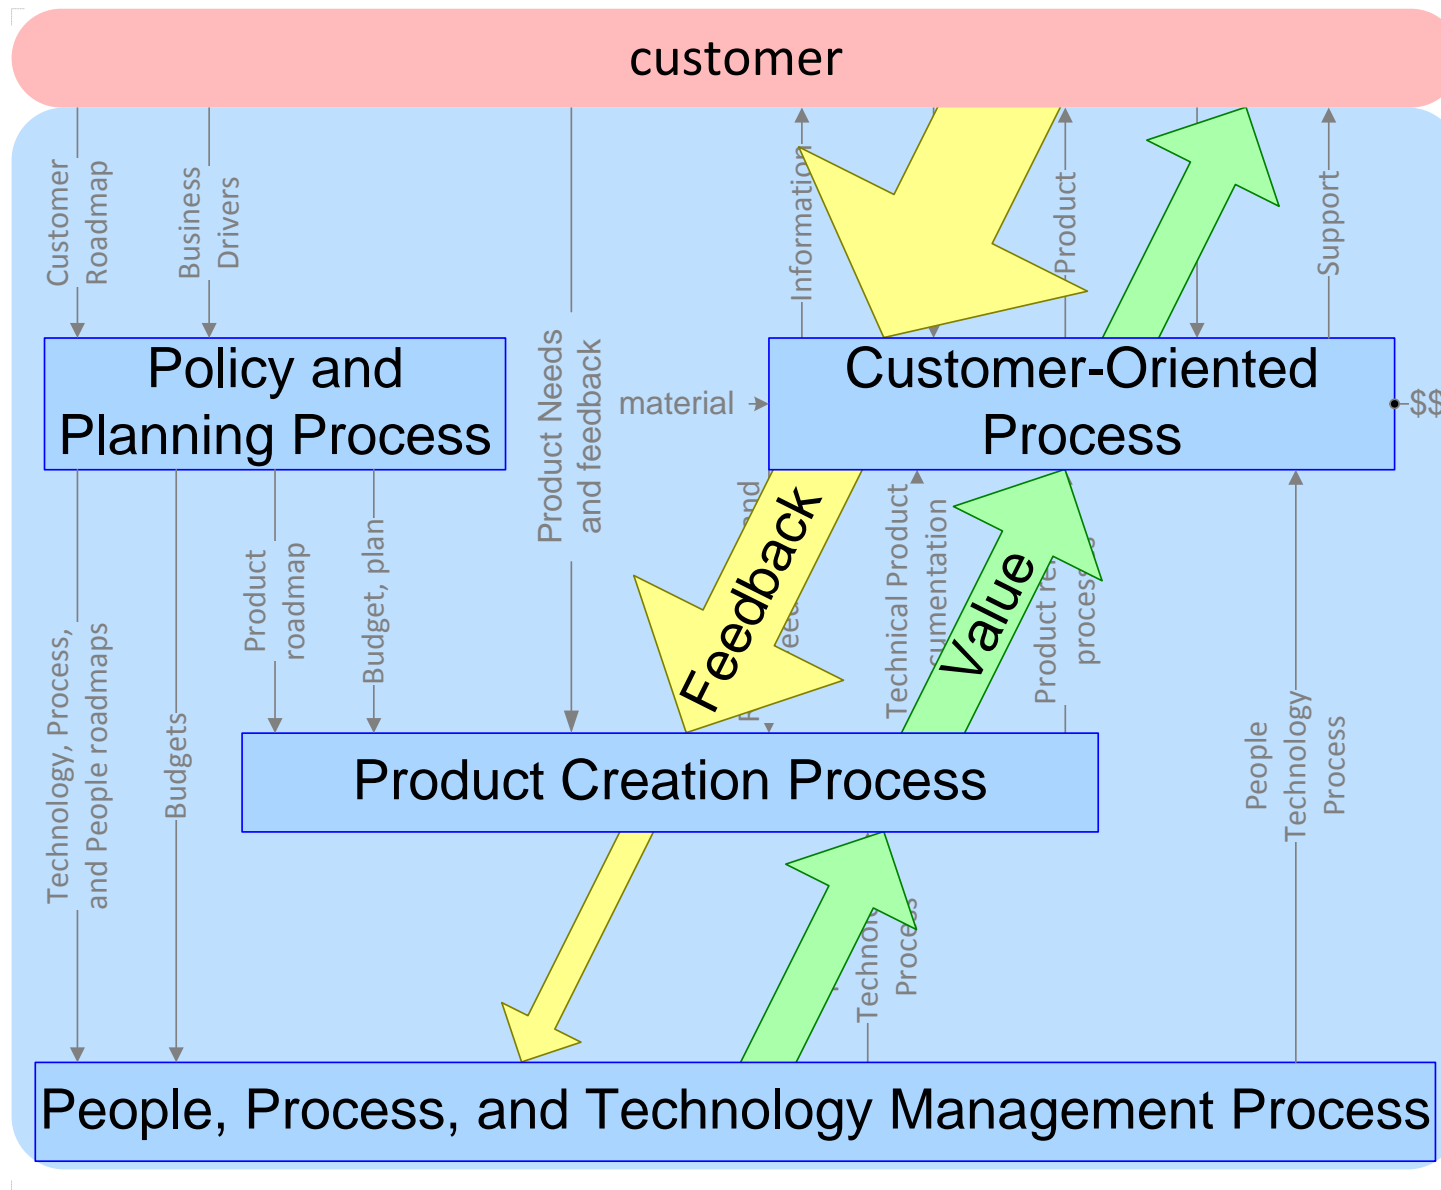

**Customer Oriented Process:** Depends on geography, customer base, and supply chain.

**Product Creation Process:** One per entity to be developed, where such an entity can be a product family, a product, or a subsystem.

**People and Technology Management Process:** One per “competence”, where a competence is a cohesive set of technologies and methods.

**Policy and Planning Process:** One per business. This is the pro-active integrating process.

# The Value Chain and the Opposite Feedback Flow

# Decomposition of the Customer Oriented Process

# Extended with Generic Developments
