

# Seasonal Storage Basic Models

by *Gerrit Muller* USN-SE

e-mail: [gaudisite@gmail.com](mailto:gaudisite@gmail.com)

[www.gaudisite.nl](http://www.gaudisite.nl)

## Abstract

A set of basic models that will form a high-level conceptual model for storing renewable energy to cope with seasonal variations.

### Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

# Block Diagram

# Functional Model

# Scenarios for Energy Flows

## How to utilize the options?

- *direct consumption*
- *battery storage*
- *Hydrogen storage*
- *over-sized generation*
- *import, export*
- *demand control*
