Abstract

Dynamic behavior manifests itself in many ways. Architects need multiple complementary visualizations to capture dynamic behavior effectively. Examples are capturing information, material, or energy flow, state, time, interaction, or communication.

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

Overview of Visualizations of Dynamic Behavior

Information Transformation Flow

Timeline and Functional Flow

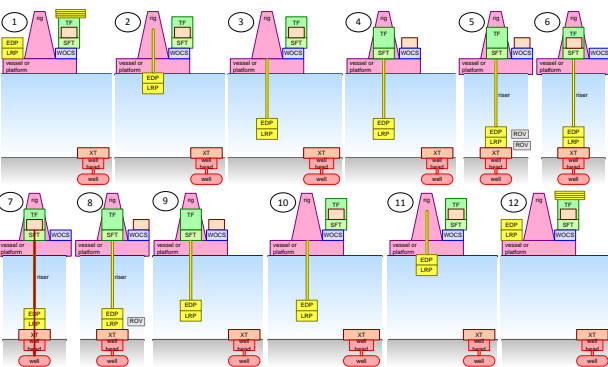

Signal Waveforms

Flow of Light

Concrete "Cartoon" Workflow

Abstract Workflow

Information Centric Processing Diagram

Timeline of Workflow

Swimming Lanes Concurrency and Interaction

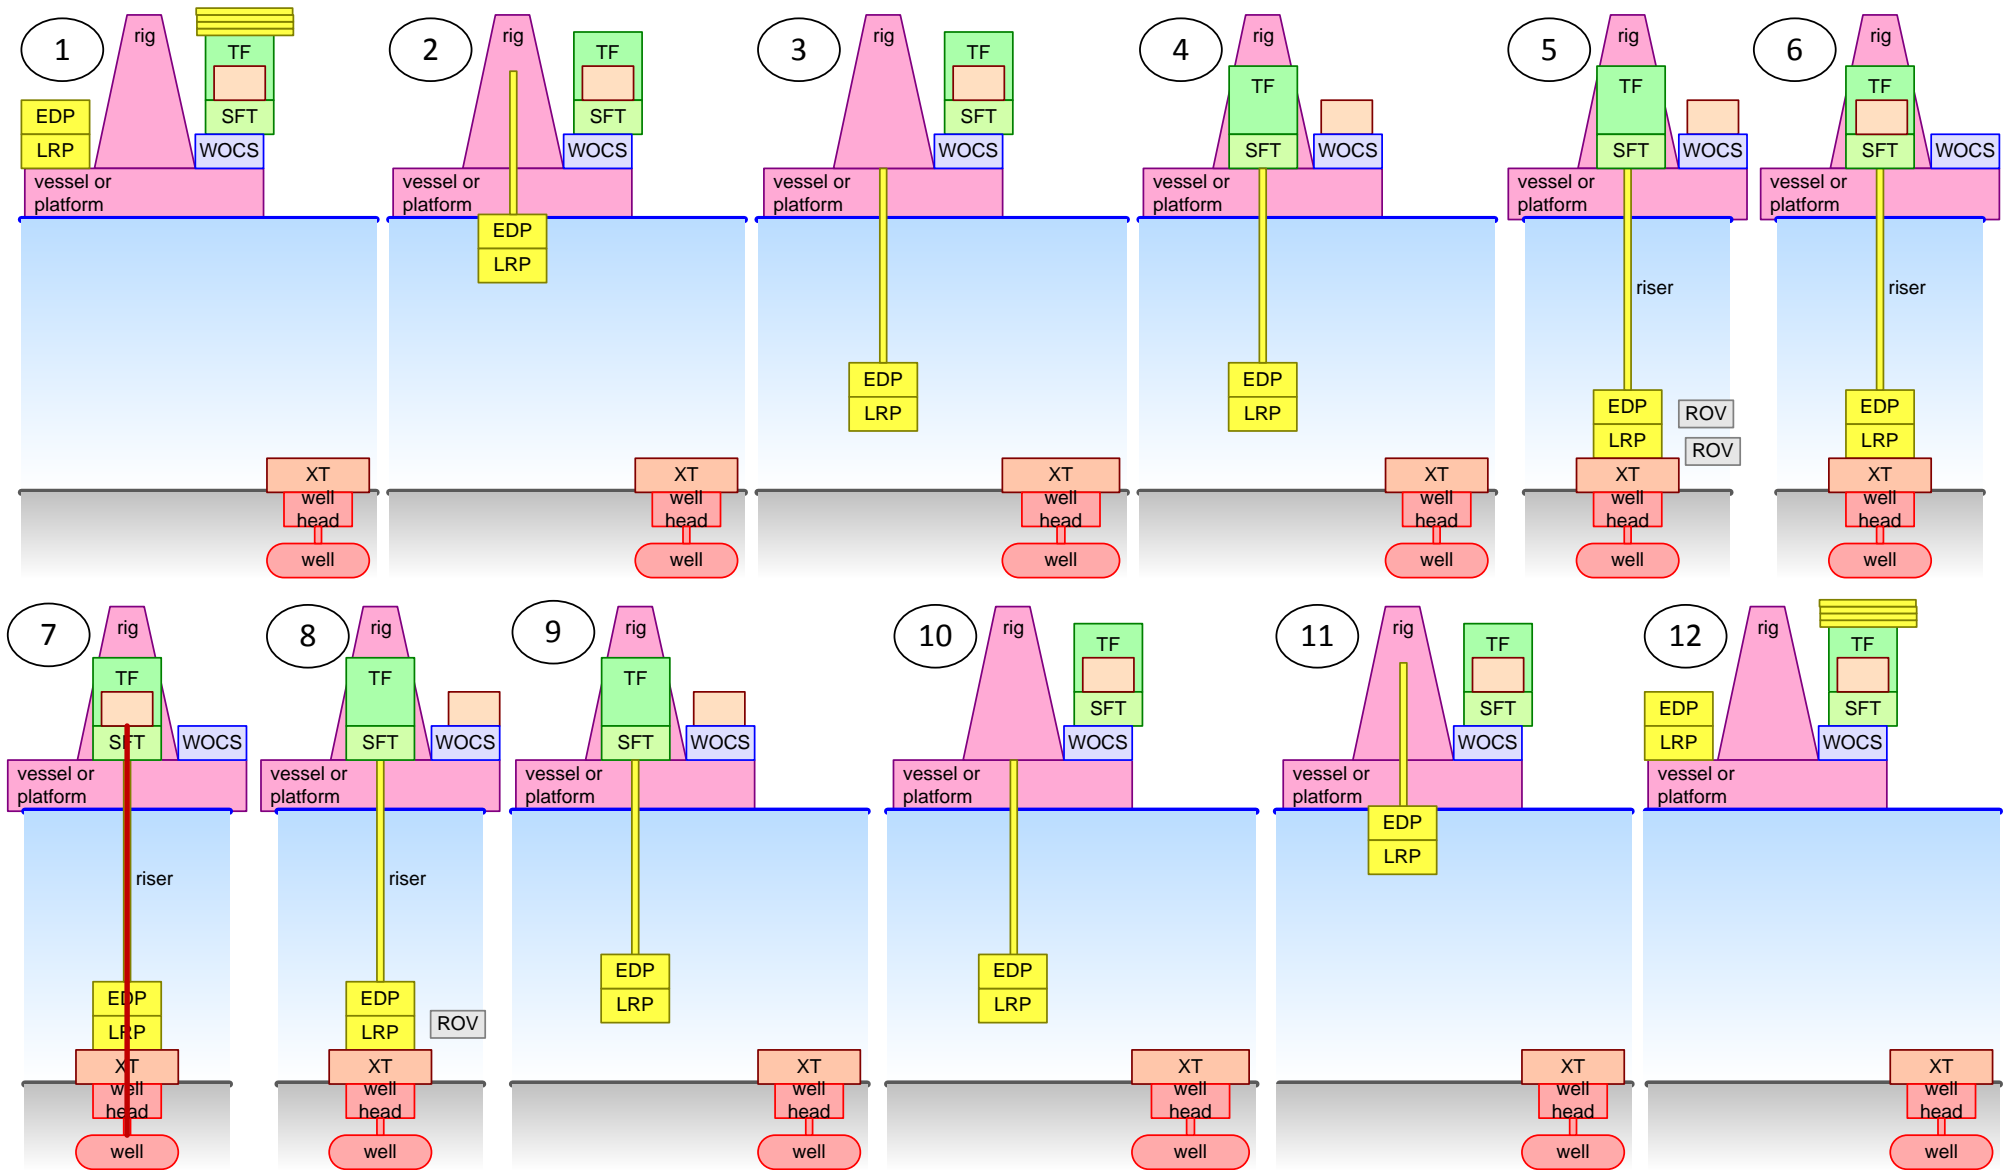

State Diagram

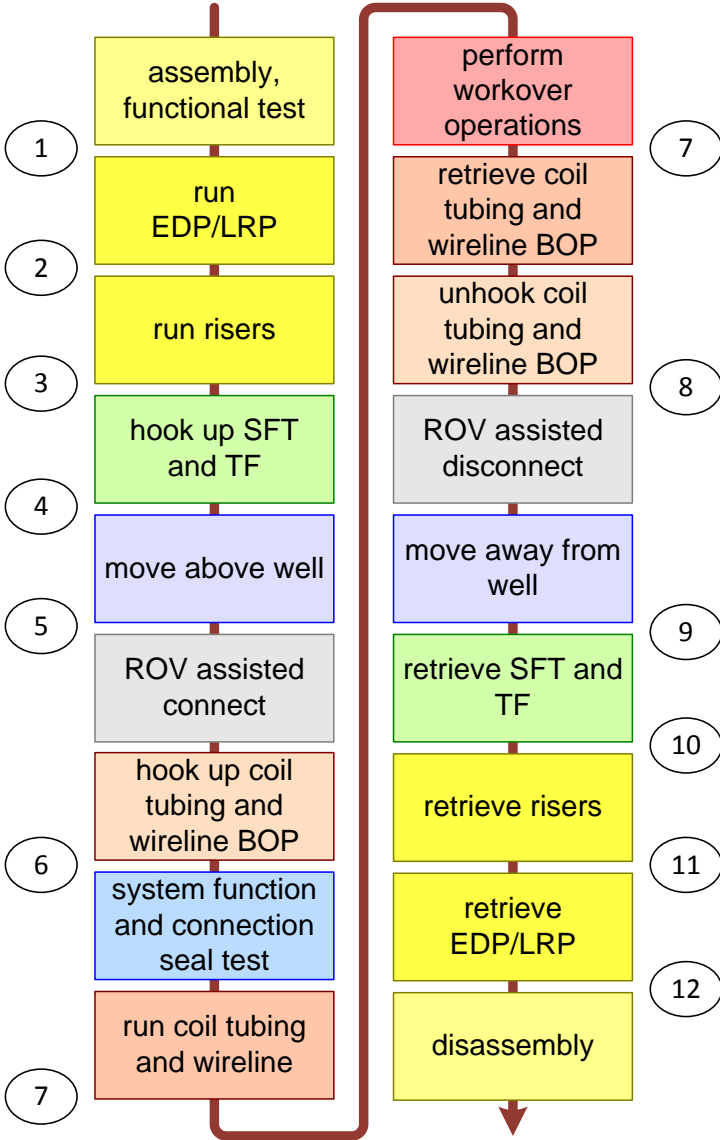

Example Functional Model of Information Flow

"Cartoon" Workflow

Workflow as Functional Model

Workflow as Timeline

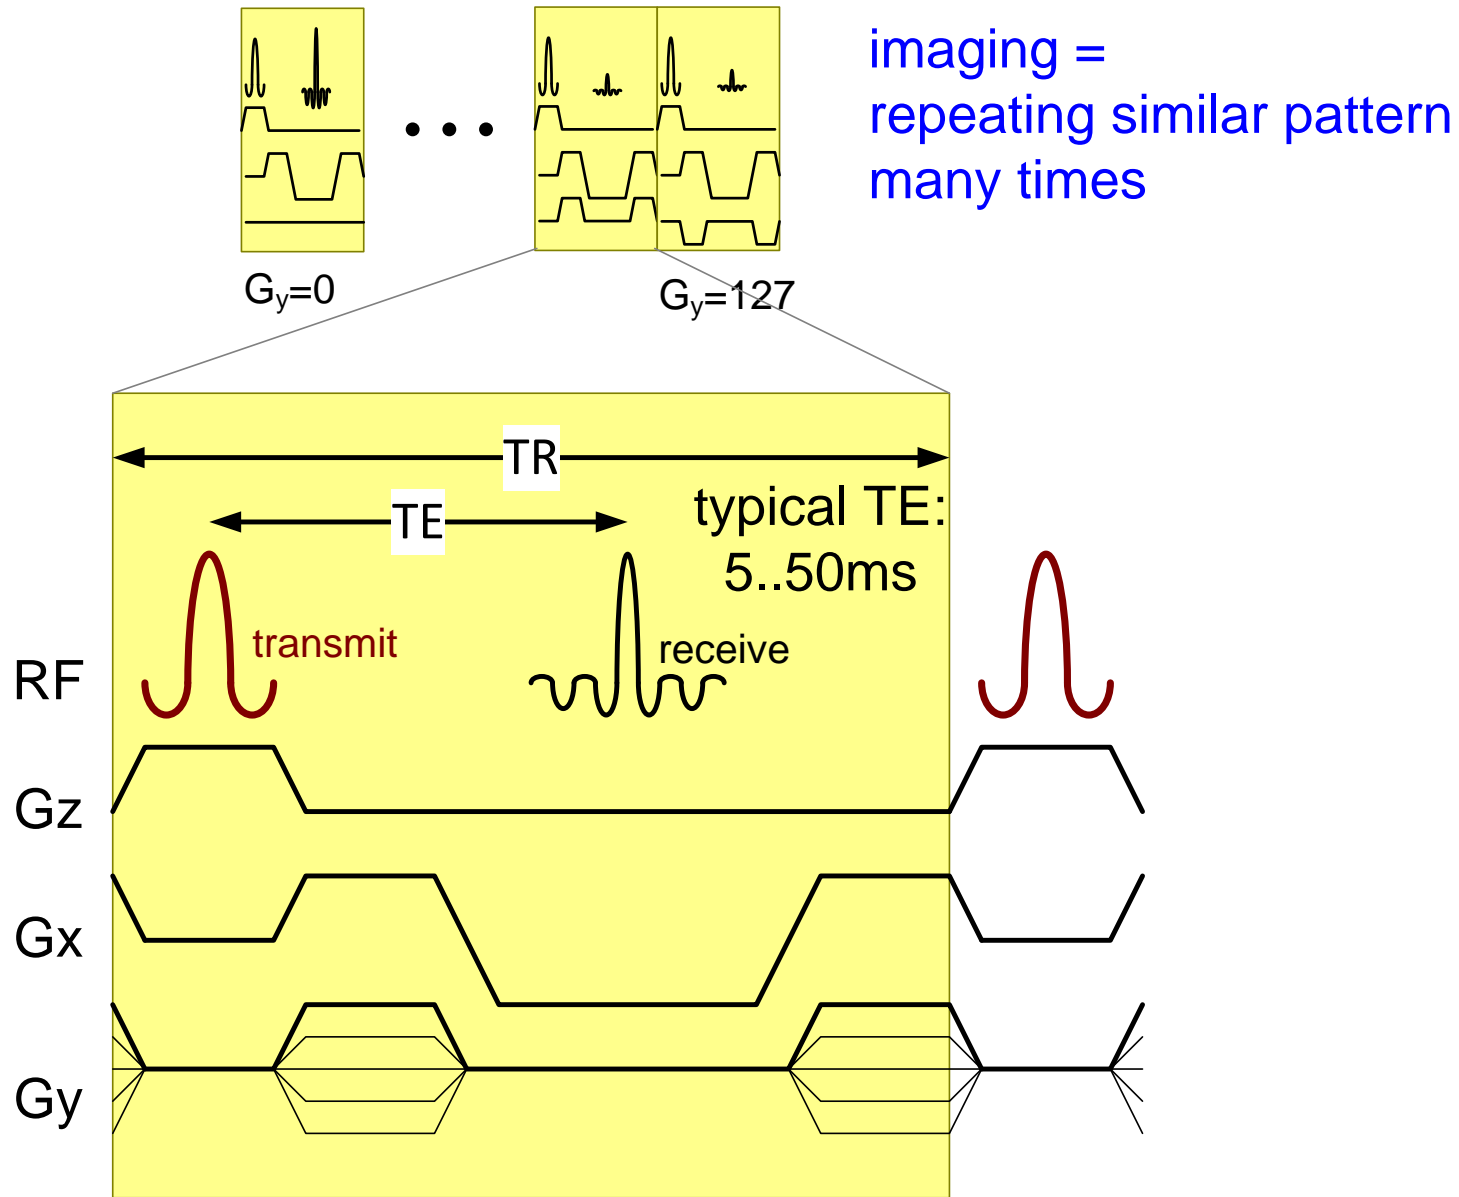

assumptions:
 running and retrieving risers: 50m/hr
 running and retrieving coiled tubing/wireline: 100m/hr
 depth: 300m

Swimming Lane Example

Example Signal Waveforms

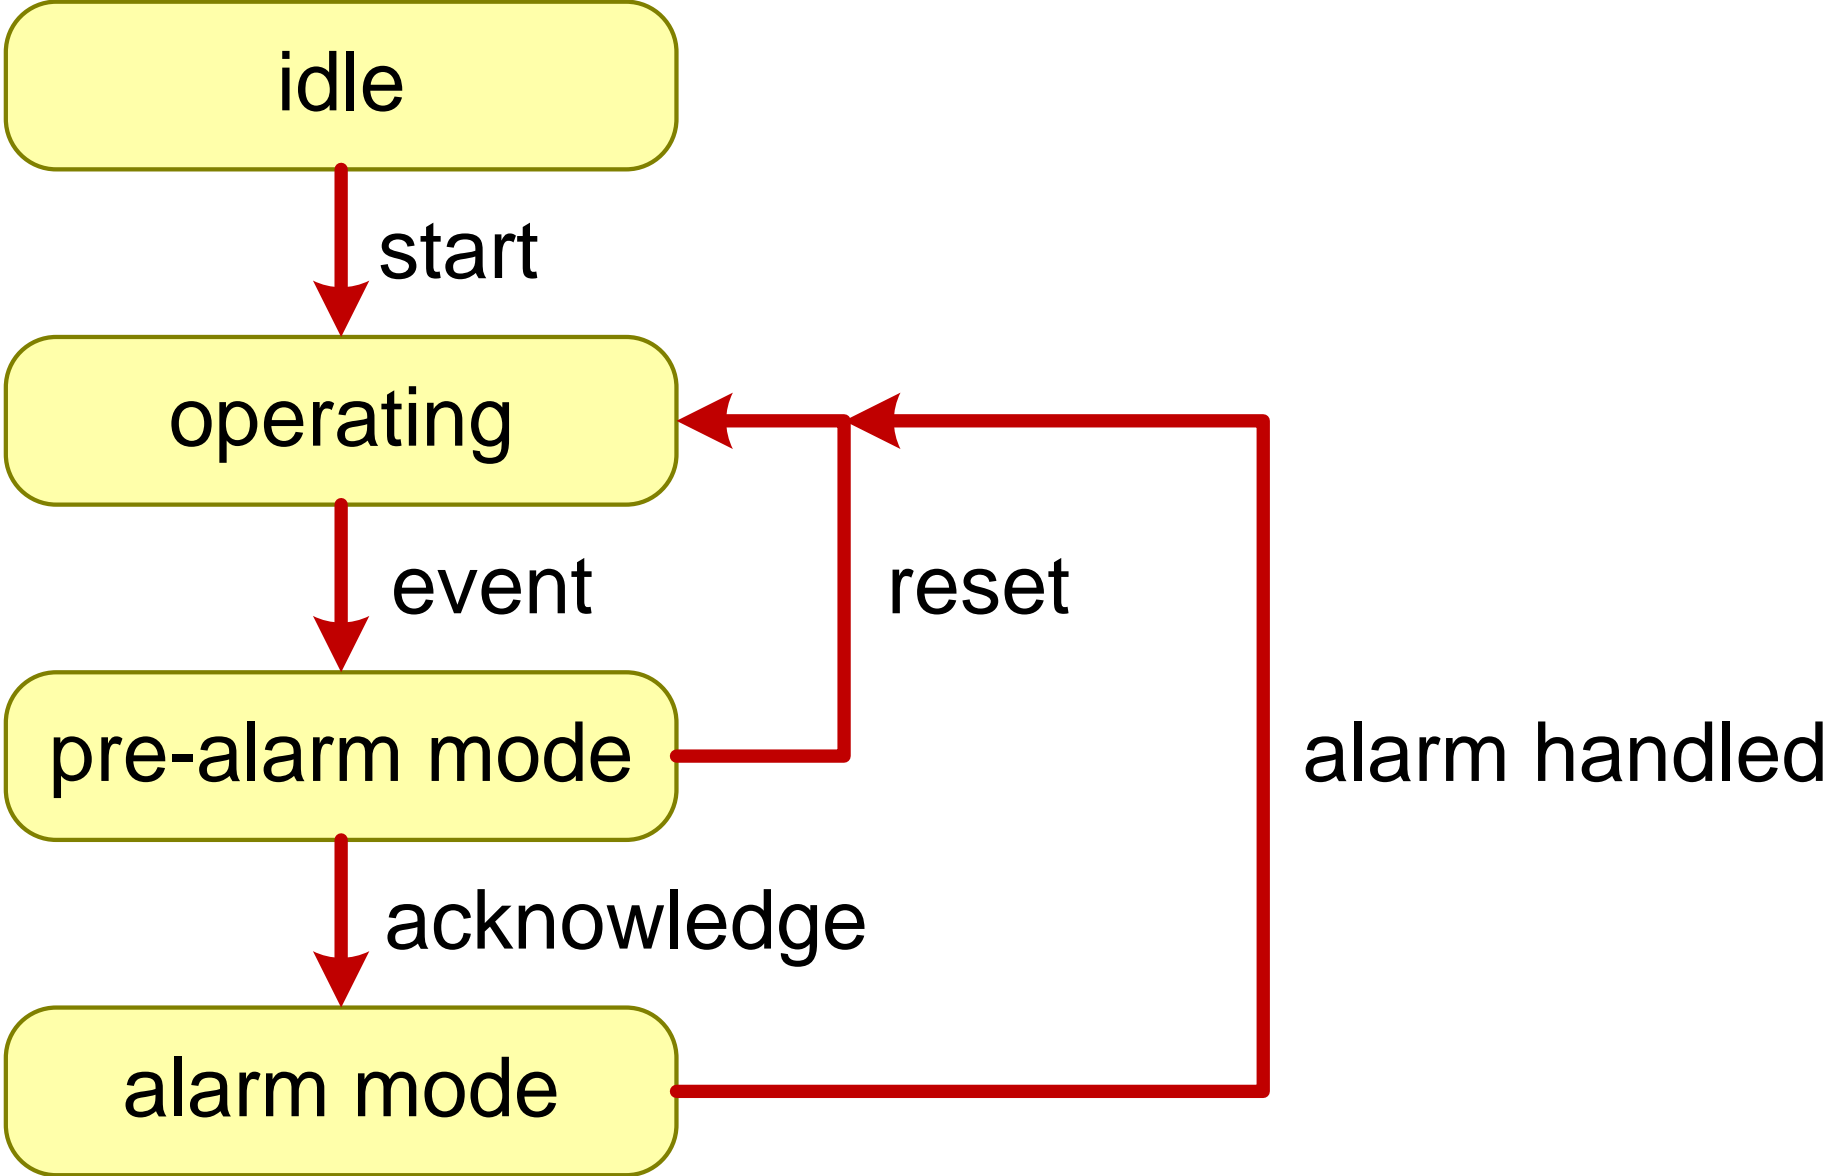

Example Time Line with Functional Model

Information Centric Processing Diagram

Example State Diagram

Flow of Light (Physics)

Dynamic Behavior is Multi-Dimensional

How does the system work and operate?

Functions describe *what* rather than *how*.

Functions are *verbs*.

Input-Process-Output paradigm.

Multiple kinds of flows:

physical (e.g. hydrocarbons, goods, energy)

information (e.g. measurements, signals)

control

Time, events, cause and effect

Concurrency, synchronization, communication

multi-dimensional
information and
dynamic behavior
